

p2 - Ej 11

$$g'(p) \leq k < 1 \text{ en } I = [\overset{a}{x_0 - \delta}, \overset{b}{x_0 + \delta}] \quad p = (x_0, y_0)$$

implica si g'
cont en p

$$g(I) \subset I? \quad \text{⊗}$$

$$g[a, b] \subset [a, b]$$

$$[\sqrt{a}, \sqrt{b}] \subset [a, b]$$

$$\text{⊗} \quad |g(x_2) - g(x_1)| \leq k |x_2 - x_1| \quad \text{en } I$$

$$x \in I, \text{ para } g(x) \in I \Leftrightarrow |g(x) - x_0| < \delta \quad \text{⊗ } \delta \times \text{HiP}$$

$$|g(x) - g''(x_0)| \leq k |x - x_0|$$

$$\Leftrightarrow |x - x_0| < \delta$$

El otro TE0:

Aca x_0 significa
el valor de x
escogido
p/ comenzar
la iteración

HiP:

$$|g(x) - g(y)| \leq \lambda < 1$$

$$\text{en } [x_0 - \delta, x_0 + \delta]$$
